SHIIRO GAMES · ART & SOUND · V1.1

While Stocks Last! Asset Guidelines

How to draw and record for the remade house: 6 rooms and 50 products, each with a glitched version. The game builds every room automatically from your Photoshop layer names, so following these rules means a new asset works the moment you save it, with no extra programming.

ART · 1

One PSD per room

1.1 Size and files

- Each room is its own file at **1920 × 1080 px** (16:9), the size of the game screen. The current Bathroom and Balcony files already follow this.
- Name them `PSD_Room_Bedroom`, `PSD_Room_TVRoom`, `PSD_Room_Kitchen`, `PSD_Room_Hallway`, `PSD_Room_Bathroom`, `PSD_Room_Balcony`, saved in `Assets/Art/Source/Rooms/`.
- Keep the **top 90 px** calm (ceiling or wall, nothing to click). The day and points bar sits there. Keep the **bottom-left corner** (about 450 × 120 px) calm too, for the room name.
- Keep the left and right **middle edges** free of small objects: the room arrows sit there.

> **Why:** the old house squeezed four rooms into one 4096 × 1714 file. Each room came out wider than the screen, which caused the black bars and clipped objects at the edges.

1.2 Fixed places

- Draw every product **exactly where it will appear** once bought, on its own layer. The game hides it until the player buys it.
- Spread the 50 products across rooms, roughly 8 per room, so every room grows as the player shops.
- Products may overlap furniture (a lamp on a cabinet), but avoid stacking two products on the same spot. Each must be clickable.

ART · 2

Layer names do the work

The game reads each layer's name to decide what it is. Use these patterns exactly. Capitals and spaces matter.

LAYER NAME	WHAT IT IS	IN GAME
`Background`	Walls, floor, ceiling	Never clickable
`Scenery_Staircase`	Fixtures that never change: railings, pipes, built-in shelves	Never clickable, never glitches
`Fridge`	Furniture the player starts with	Clickable; can glitch
`Fridge Anomaly`	The glitched version of `Fridge`	Swapped in when it glitches
`Item_Lamp`	A product (one of the 50)	Hidden until bought
`Item_Lamp Anomaly`	The glitched version of `Item_Lamp`	Swapped in when it glitches

2.1 Naming rules

- Every name is **unique within its file**. Photoshop silently allows duplicates; Unity renames them `Lamp_1` and the pairing breaks.
- A glitch layer is the **exact normal name plus** `Anomaly` (one space). `Item_Lamp Anomaly` pairs with `Item_Lamp`; `Lamp anomaly` does not.
- Use plain letters, numbers and spaces. Name products in PascalCase after `Item_`: `Item_StanleyCup`, `Item_BoardGame`.
- No "Layer 12" names. Unnamed layers are why several current objects needed hand-fixing.

2.2 One object, one layer

Everything that should move and wiggle together goes on **one layer**: the bathtub and its rim, a bed with its blanket and pillows, a towel rail with its towels.

> **Why:** the old bathtub was two layers, so only half of it shook when clicked. Merge parts before saving. Keep your unmerged working copy in a separate file if you want it.

ART · 3

Drawing glitches

In the story, glitches are bugs in BuyMe's house that the player reports for a bounty. Some also carry hidden messages from previous testers. Coordinate those messages with the scriptwriter.

DO

- Draw the glitch **on the same spot** as the normal object, the same size or close to it.
- Make it **obvious at game size**: view at 100% on a 1080p screen from arm's length.
- Change something big: the silhouette, a strong colour, a face, text.
- Make text at least **28 px tall** so it reads on a laptop.
- Give every product and most furniture a glitch. Drawn glitches are the most fun part of the game in playtests.

DON'T

- Only change fine detail. The balcony pot's thin white lines were invisible at game size.
- Put tiny details inside small areas. The door window's ghost faces were too small to notice.
- Move the glitch somewhere else in the room. The click area stays where the normal object is.
- Make the glitch much smaller than the original. It gets hard to click.

ART · 4

Photoshop settings

Unity reads the raw pixels of each layer. Anything Photoshop draws "live" on top is lost.

FINE TO USE

- RGB, 8 bits per channel, transparent backgrounds
- Normal pixel layers
- Groups, to keep your file tidy (only layer names matter)
- Hidden layers (they still import)

RASTERIZE OR AVOID

- Layer styles: stroke, drop shadow, glow (they disappear)
- Smart objects, adjustment layers, fill layers
- Clipping masks and layer masks (apply them first)
- Blend modes other than Normal (bake them in)

> **Quick test:** if the layer looks the same after *Layer → Rasterize → Layer Style* and you can still see it with all other layers hidden, Unity will see it the same way.

ART · 5

Shop icons

- One file, `PSD_ShopIcons`, in `Assets/Art/Source/UI/`, with one layer per product named `Icon_Lamp` to match `Item_Lamp`.
- Draw each icon to fit a **512 × 512 px** square, centred, on transparency, with the product facing the viewer.
- Keep the style consistent across all 50, because they sit side by side four at a time in the shop.

SOUND

Sound effects and music

TYPE	FORMAT	LENGTH	LOUDNESS
Click and product sounds	WAV, 48 kHz, 16- or 24-bit, **mono**	0.2–1.2 s	Around −18 LUFS, peaks below −1 dBFS
UI and event sounds	WAV, 48 kHz, mono	0.2–2 s (stings up to 5 s)	Around −18 LUFS
Music	WAV, 48 kHz, **stereo**	1.5–3 min, seamless loop	Around −20 LUFS, under the effects

S.1 Rules that matter most

- **No silence at the start.** A click sound must begin within 10 ms, or clicking feels laggy.
- **Match names to the art:** `SFX_Lamp.wav` for `Item_Lamp`. An optional glitched version is `SFX_Lamp_Anomaly.wav`; otherwise the game plays the normal sound pitched down.
- **Music loops cleanly:** no fade-out tail; the last beat runs straight into the first. Name tracks `MUS_Day_05` and onwards.
- Keep levels consistent across the set so no single product is jarringly loud.
- Folders: `Assets/Audio/SFX/Items/`, `Assets/Audio/SFX/UI/`, `Assets/Audio/Music/`.

S.2 Game sounds we need

Today one notification chime is reused for fixing a glitch, "can't afford" and the glitched flyer, so success and failure sound the same. Distinct sounds will make the game much easier to read.

FILE NAME	WHEN IT PLAYS	FEEL
`SFX_BountyPaid`	A glitch is fixed and pays a bounty	Bright, rewarding, short
`SFX_BountyExpired`	A glitch is fixed too late to pay	Dull thunk, flat
`SFX_CantAfford`	Buying without enough points	Soft "nope" buzz
`SFX_Purchase`	A product is bought	Checkout ding, a little too cheerful
`SFX_DeliveryDrop`	A delivery box lands in the hallway	Cardboard thud
`SFX_EmailArrive`	A new email in the inbox	Corporate notification
`SFX_FlyerPop`	The BuyMe flyer appears	Paper slide, ad jingle
`SFX_GlitchCall`	A glitch twitches to get attention	Digital stutter, uneasy
`SFX_LightFlicker`	Lights flicker when glitches pile up	Electrical buzz
`SFX_ForcedSleep`	The player is too tired and passes out	Heavy, fading
`SFX_DayStart`	Each morning begins	Gentle wake-up, slowly less gentle over the days
`SFX_Ending_*`	Each story ending (list from the scriptwriter)	Stings, 3–5 s

Story events (doorbell, power cut and so on) will come from the scriptwriter's event list. We'll share it when it's ready.

SHARED

The product catalog sheet

One shared spreadsheet tracks all 50 products so art, sound, writing and programming stay in sync. The game will read it directly, so keep the column names as they are.

COLUMN	EXAMPLE	FILLED IN BY
`Id`	`Lamp` (matches `Item_Lamp`, `Icon_Lamp`, `SFX_Lamp`)	Art lead
`DisplayName`	Mood Lamp 3000	Scriptwriter
`Room`	Bedroom	Art
`PriceTier`	1–4 (exact prices set later)	Design
`Art` / `Anomaly` / `Icon`	todo · drafted · done	Art
`Sound`	todo · drafted · done	Sound
`ShopText`	"Light that loves you back."	Scriptwriter
`Notes`	Anomaly hides a tester's message	Anyone

SHARED

Before you hand over

- [ ] Saved over the same file name in the same folder (new files: named as above)
- [ ] Every clickable thing is one layer with a unique, readable name
- [ ] Every glitch layer is the normal name plus " Anomaly", drawn on the same spot
- [ ] No layer styles, smart objects, masks or special blend modes left

- [ ] Glitches checked at 100% zoom on a 1080p screen
- [ ] Sounds start instantly, are named to match, and loop cleanly (music)
- [ ] Catalog sheet updated, and any **renamed or deleted layers** told to the programmers

> **Renaming matters:** adding layers is always safe. Renaming or deleting one can unhook it from the game, so a quick message saves a confusing bug.

While Stocks Last! by Shiiro Games. Questions about these rules go to the programming team. Version 1.1, November 2026.
